### EXECUTIVE SUMMARY

Led a complete cloud migration and physical server exit with no VM lift-and-shift, moving the business to a managed-services operating model. Core identity, messaging, collaboration, and file services were transitioned to Microsoft 365, Entra ID, Exchange Online, and OneDrive to improve security posture, resiliency, and operational efficiency.

### KEY OUTCOMES

- Executed full on-premises exit by retiring physical server infrastructure and legacy VM dependency.
- Migrated identity and directory services to Entra ID and removed legacy on-prem Active Directory operational overhead.
- Moved domain policy enforcement and machine management to Microsoft Intune for centralized endpoint governance.
- Transitioned messaging and productivity workloads to Exchange Online and Microsoft 365 managed services.
- Moved file server workloads to OneDrive to improve collaboration access, continuity, and platform governance.
- Established a cloud-managed operating model that reduced infrastructure administration burden and improved service reliability.
